

Evaluation Criteria Form

Evaluation Likert Scale and Descriptions

Scale Value	Likert Scale	Description
1	Strongly Disagree	I completely disagree with the statement
2	Disagree	I generally disagree with the statement
3	Neutral	I neither agree nor disagree with the statement
4	Agree	I generally agree with the statement
5	Strongly Agree	I completely agree with the statement

Proposed Practices and Descriptions

Challenge	Practice	Description
CI3- Delays in work due to unclear goals and requirements of tasks	P1: Clearly communicate and record task updates	- Ensure every task, user story, or requirement is well-documented and clearly communicated including Objectives, Technical requirements, Success criteria, Dependencies Deadlines before assigning it. Use Visual Aids including diagrams, mockups, or flowcharts for Complex requirements to reduce ambiguity - For teams with time zone differences or communication challenges, record video/audio updates summarizing requirements for clarifications.
	P2: Well-Defined Acceptance Criteria and Definition of Done (DoD)	- Add a checklist to every task that describes what completion looks like to minimize back-and-forth and misalignment on expectations - Before starting implementation, require formal review and sign-off on requirements documents by all relevant stakeholders to ensure everyone agrees on goals
	P3: Centralized and Versioned Requirements Repository	- Store all project requirements, specifications, and design docs in one central location that is version-controlled and accessible by the entire team. - Use tools that allow commenting and discussion directly on the documents to keep clarifications in one place
	P4: Structured and Traceable Change Requests	- Formalize a change request system where all clarifications or updates to requirements are logged, reviewed, and approved. - Use issue trackers with clear links between change requests and affected requirements or code. - Use tools that support inline comments on changes and allow team members to resolve or respond, keeping all communication tied directly to the specific content to make the
	P5: Implement “Clarify First, Code Later” Culture	- Encourage a culture where developers must clarify unclear tasks before starting. - Team leads or project managers establish a checklist to verify task readiness. - For critical or complex tasks, schedule short 5–10 minute kickoff calls to align expectations and answer quick questions. - Encourage communication through channels that preserve context (e.g., message threads, emails with detailed subjects) rather than quick chats or calls that might be forgotten
II7- Difficult to disengage after	P6: Define Core Hours	Establish overlapping "core working hours" when everyone is expected to be available for real-time communication.
	P7: Respect Working Hours	Establish and communicate clear working hours for each team member based on time zones.

working hours		- Encourage the team to log off on time, and avoid messaging or assigning tasks outside agreed hours unless it's urgent - Turn off or muting work-related notifications outside of their working window - Schedule emails, messages, or updates to be sent during working hours only even if drafted after hours
	P8: Asynchronous Communication Culture & Status Indicators	- Encourage clear status updates on chat platforms (e.g., "Available," "In Focus Mode," "Offline"). - Promote messaging over meetings for non-urgent matters
	P9: Encourage End-of-Day Rituals	- Promote simple routines like summarizing the day, closing all tabs, or creating a to-do list for tomorrow before logging off. - Helps the mind separate "work mode" from "home mode"
	P10: Offer Mental Health and Wellness Support	Provide access to wellness resources such as counseling, meditation apps, or fitness classes. Normalize conversations around work-life balance
CI4- Difficulty in Understanding Others	P11: Encourage Video Calls (when needed)	Helps restore non-verbal communication and human connection
	P12: Create a Team Communication Guide	- Define best practices around language, tone, and communication preferences and encourage the use of tone indicators, emojis, and "assume good intent" culture - For globally distributed teams, use tools that support real-time translation or transcription
CI1- Difficulty in Contacting Peers Frequently	P6: Define Core Hours	Establish overlapping "core working hours" when everyone is expected to be available for real-time communication
	P8: Asynchronous Communication Culture & Status Indicators	- Encourage clear status updates on chat platforms (e.g., "Available," "In Focus Mode," "Offline"). - Promote messaging over meetings for non-urgent matters
II2- Inconsistencies in the quality of work produced by others	P13: Define Clear and Measurable Quality Standards	- Establish explicit quality criteria and acceptance standards for every task or deliverable. - Document these standards in task descriptions or project guidelines to ensure everyone understands expectations.
	P2: Well-Defined Acceptance Criteria and Definition of Done (DoD)	- Add a checklist to every task that describes what completion looks like to minimize back-and-forth and misalignment on expectations - Before starting implementation, require formal review and sign-off on requirements documents by all relevant stakeholders to ensure everyone agrees on goals
	P14: Implement Structured Peer Reviews and Continuous Feedback	- Require formal peer review or approval workflows before marking tasks as complete - Assign reviewers with the relevant expertise to ensure adherence to quality standards - Encourage teams to provide timely constructive feedback on deliverables - Use retrospectives or regular check-ins to discuss quality challenges and update standards
	P15: Assign Mentors or Quality Champions	- Designate experienced team members to mentor others and act as quality champions for critical tasks. - They help guide work and maintain consistency across the team
	P16: Time Blocking and Focus Periods	- Encourage team members, especially those with unique skills, to set "focus periods" where they are not to be disturbed with new requests unless urgent - Use shared calendars or task system notifications to communicate these focus blocks

		Promote time blocking and focused work sessions to reduce rushed or distracted work that can impact quality
II3- Frequent tasks and requests due to unique skill set	P17: Implement a Transparent Task Assignment System	- Use a centralized task management tool where all tasks and requests are logged and visible to the whole team - Ensure tasks are assigned based on skill set but with clear visibility so managers and team members can identify workload imbalances early
	P18: Create a Skill-Based Task Routing Process	- Define a process where requests are initially triaged based on required skills - When possible, assign routine or less complex tasks to team members who are developing related skills, reserving experts for high-priority or complex issues - Categorize tasks by priority and complexity to help manage expectations and workload
	P19: Implement a Task Escalation and Delegation Protocol	- Define clear rules on when a task should be escalated to a unique-skill expert and when it can be delegated or reassigned. - Empower team leads or managers to redistribute tasks as needed to avoid overloading individuals.
	P20: Regular Review of Task Distribution	- Conduct frequent reviews (weekly or biweekly) of task assignments to check for bottlenecks. - Use task reports to identify who is overloaded and adjust assignments proactively.
	P16: Time Blocking and Focus Periods	- Encourage team members, especially those with unique skills, to set “focus periods” where they are not to be disturbed with new requests unless urgent. - Use shared calendars or task system notifications to communicate these focus blocks. Promote time blocking and focused work sessions to reduce rushed or distracted work that can impact quality
CI15- Excessive Collaboration / required more Meetings	P21: Adopt a “Meeting Curfew”	Reserve one day per week with no meetings to allow deep work and replace with short status sharing notes like what’s done, what’s next, blockers via messages
	P22: Set Clear Agendas & Time Limits	Keep meetings short and purposeful with defined outcomes
	P23: Implement the “2-Pizza Rule” in meetings	If a meeting needs more people than two pizzas can feed, it’s probably too big. Avoid adding irrelevant stakeholders in the meeting.
TCI2- Software glitches/ network issues/ service outages	P24: Reliable Infrastructure Setup and Standardized software tools	- Use stable, high-speed internet connections and ensure the availability of necessary hardware like routers, backup power supplies, or mobile hotspots - Use centralized, cloud-based collaboration platforms and development tools with strong support and uptime guarantees. - Ensure all team members use licensed and updated software versions to minimize compatibility issues.
	P25: Proactive Monitoring and Alerts	Implement network monitoring tools to monitor network health and detect network or service disruptions early by setting up automated alerts for both individual users and IT teams to address issues before they escalate
	P26: Robust IT Support and Rapid Response	Establish a responsive IT helpdesk dedicated to remote employees and provide clear escalation paths and quick troubleshooting protocols
	P27: Regular Backup and Offline Work Capabilities	Develop and ensure regular backups policy of code and work-in-progress to avoid data loss. Additionally, equip teams with the ability to work offline or in a local environment during outages

CI13- Less Awareness of Colleagues' Work Status	P28: Daily Stand-ups (asynchronously or Live)	• Share short updates (what's done, what's next, blockers) via text or video.
	P29 Use Project Dashboards	• Make work status visible through task boards/dashboards to keep the team informed about ongoing issues and estimated resolution times

Instructions for Use

- These details are intended to guide expert reviewers in understanding the practices of proposed framework
- Experts are encouraged to refer to these practices as a reference guide while completing their evaluations.
